

10mm Car Park Additional Level

B10-CS-101

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Car Park Additional Level (B10-CS-101)

Each of the four pillars are formed by the two pieces shown on the left. Slide them together to form a cross as shown on the right.

Glue each pillar into position using the lugs/holes provided.

Take the ramp side and insert it (as shown) so that the floor fits into the slot. It will then be possible to move the piece fully into position.

Add the end wall and ramp.

Then glue the outer wall into position as shown. Repeat this for the ramp at the other end of the level.

Finally glue the two long walls into place.

The completed car park with the additional level in position.
