

BLOTZ

28mm Snake Rail Fences

B28-WF-121

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Take the base and four fence sections from the sprue.

Glue the two sections with 2 lugs on to the base.

Slide the end section into position until its lug slots into the hole.

Slide the central piece into place.

The end pieces are made from these pieces.

Glue the fence pieces to the bases.

A completed fence

Painting

After construction we sprayed our fences black with a car undercoat then gave them a very rough coating of a dark brown chocolate colour. They then had a drybrush of a milk chocolate, followed by a dry brush of a cream colour.
