

**BLOTZ**

## Air Con Packs #1 / #2 / #3

**B10-ACC-407 / 408 / 409**

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

### Straight Section

Each straight section is formed from the six pieces shown above.

Glue the straight sections together so the thinner pieces fit on the blank sections of the taller pieces.  
Glue the tall pieces back to back.

Slide the collars into position using the guide-lines.  
It is easiest to do this by sliding the arms of the collar around the end of the assembly first, then shuffling it along until it is in position.

### End Section

Each end piece is formed from the five pieces shown above.

Glue the pieces together to form a 4-layer sandwich, ensuring those with the corner cut-outs are on the outside.

Slide the collar into position.

It is easiest to do this by sliding the arms of the collar around the end of the assembly first.

### Corner Section

Take the pieces shown on the left from the sprue and glue them together as shown in the middle. Add the two small square sections so you end up with the item on the right.

Turn it over and you have your corner section.

Taking three identical sections, glue these together to form a 3-layer sandwich. Glue the assembly you made in the first panel to the top as shown on the right.

### Vents

Take the six pieces shown above from the sprue.

Glue the sides together to form an open-ended square tube.

Glue the fan to the top of the tube and add the grille on top of that.

The double vent is formed the same way.
