

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

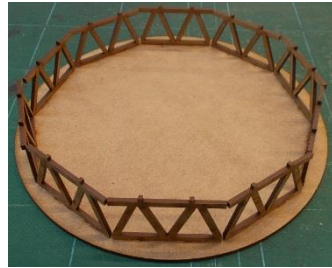

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

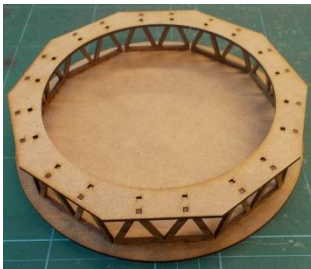

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

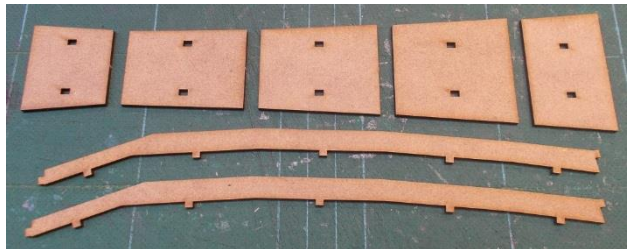

Take the base and triangle supports from the sprue.

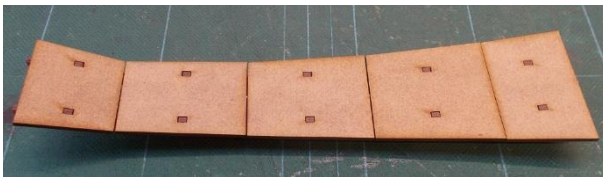

Glue the supports to the base.

Attach the lower ring to the supports, gently moving each until its lugs go into the holes.

Each side piece is formed from the pieces shown above.

Once they are glued into place, they should look like this.

Glue three side pieces to the lower ring as shown.

Glue the top ring into position.

Work round the tower, adding each strip in turn. Place its bottom lugs into the lower ring, then gently ease it into the top ring.
