

BLOTZ

20mm Billboards

B20-ACC-003

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

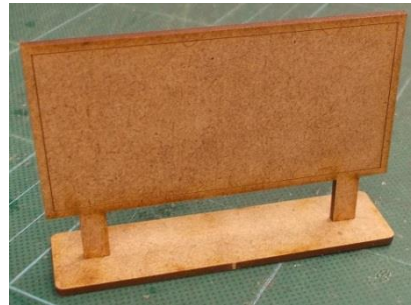

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

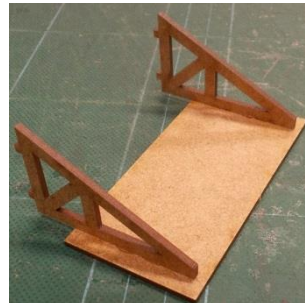

Two of the billboards are formed using the pieces shown above.

Simply insert the lugs on the billboard into the base as shown.

The third billboard uses these pieces.

First of all insert the supports into the back of the billboard (i.e. the side without the etches rectangle on it)

Then insert the supports into the base. Note the supports should be aligned so that they touch one edge of the base (see pic)
