

20mm Mausoleum

B20-ST-115

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Remove the two end walls, side walls and ridge from the sprue.

Attach the side walls and ridge to one end piece.

Add the other end piece.

Glue the model to its base.

Take the two gate pieces.

Glue one inside each end as shown above.

Take the side and end decorations.

Glue them into position as shown.

Finally add the two roof pieces, slotting them into the holes provided.

The finished model.

Painting.

We sprayed our model black using a car undercoat / primer aerosol, then dry-brushed all the stonework with three shades of blue/grey with each layer getting lighter in colour.

The roof was painted navy blue before being drybrushed with an ice-blue colour.

The grilles were painted gold.
