

## 28mm Middle Eastern Building #5

### B28-ME-005

Please read these instructions fully before starting construction.  
PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Remove the four main walls from the sprue.

Glue them together as shown to form two separate sections.

Attach the sections together and glue them to the base.

Take the remaining walls...

..and glue them into position.

Take the two pillars....

..and glue them into place just inside the opening in the wall.

Take the roof supports as shown above.

Glue them into place so that they extend through the wall (see pic).

Place (do not glue) the roof into position, then glue the trapdoor to it.

The completed building.
