

28mm Middle Eastern Building #7

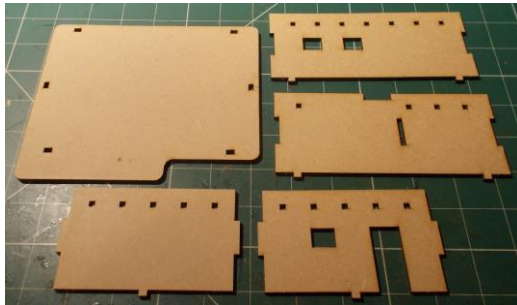

B28-ME-007

Please read these instructions fully before starting construction.
PVA or equivalent glue will be required to stick sections together.

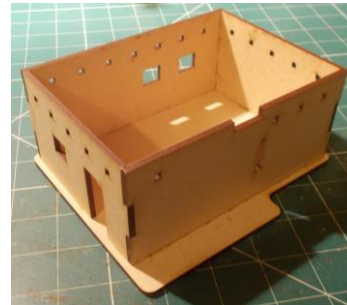

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Remove the four main walls and base from the sprue.

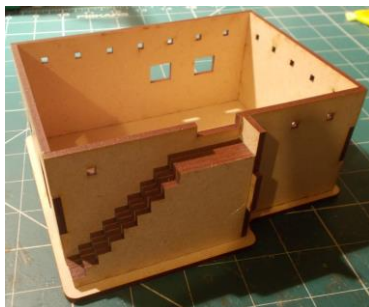

Glue them together as shown to form an open topped box.

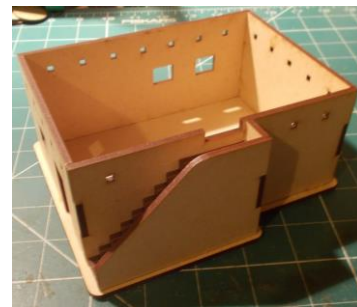

Take the four sections of steps and two surrounding walls from the sprue.

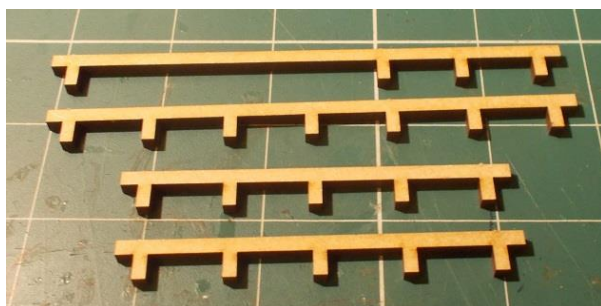

Glue the short wall into position.

Insert the four sections of steps....

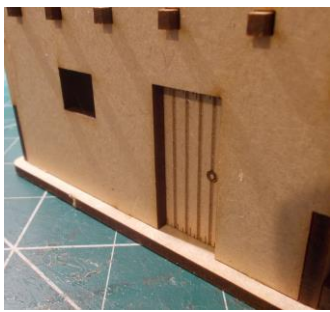

...then glue the covering wall into place.

Take the roof supports as shown above.

Glue them into place so that they extend through the wall (see pic).

Glue the door into position.

Place (do not glue) the roof into position, then glue the trapdoor to it.

The completed building.
