

28mm 3x3 End (Short Building)

BLOTZ

B28-SB-001

Please read these instructions fully before starting construction.

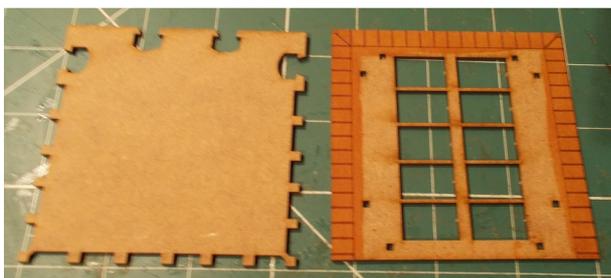

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

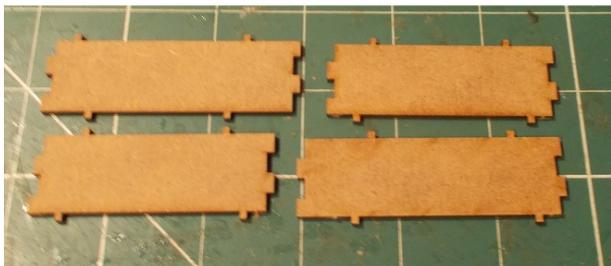

It is easier to paint some pieces of the kit before assemble – please see the end of the document for painting tips.

Take the base and floor sections from the sprue.

Glue the base underneath the floor so the two connector spaces are under the "blank" end of the floor.

Remove the inner wall pieces.

Starting with one of the two longer wall pieces (which form the sides of the building), move around the building attaching the inner walls to the base as shown above.

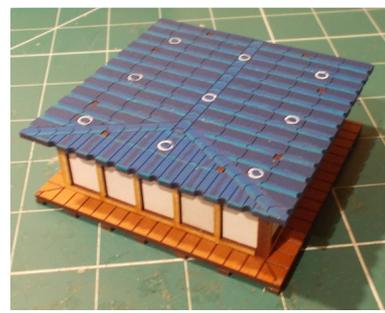

Take the four wall frames from the sprue.

Starting with one of the longer frames, align its open end with the corner of the building. This will mean its "solid" end sticks out by around 3mm. Work around the building adding each frame in turn.

Attach the wall panels. Note – the panels which were located in the centre of the floor piece go onto the longer sides of the building as they are slightly wider.

Glue the roof into place so the flat edge is at the back of the building.

Painting your model

The floor was removed from the sprue and the edges of it painted with a wood stain.

The wall panels were removed from the centre of the floor section, but the remaining ones were left on the sprue. These were then sprayed white using a standard car body undercoat spray.

The roof was initially sprayed Navy Blue (using an Army Painter spray) and then the wider tiles were painted with a Royal Blue. A highlight of pale blue was added to one edge of the thinner tiles

The ridge has a dash of Royal Blue inside the closest edge of each tile and pale blue on the other side of the line.

The front tile just has highlights of the two colours as shown.

The circles were then painted white and any overspill from them tidied up with royal blue.
