

The logo for 'BLOTZ' is a black, irregular shape resembling a splatter or a cloud, with the word 'BLOTZ' written in white, bold, sans-serif capital letters inside it.

## 28mm Sci-Fi Walls – 240mm Wall #1

### B28-SFW-012

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Each end of the wall is formed from the pieces shown above.

Glue the two hooked pieces through the back plate, ensuring the hooks all point in the same direction.

Add the outer later.  
Repeat this for the other end piece.

Glue the two ends to the base.  
The base and "Lid" are the same.

Add the side walls.

Glue the "lid" into place.

Attach the outer wall decoration.

If you want flat ends rather than hooked ones, use the two pieces shown above in place of each hooked end section.

The completed and painted wall.

### **Painting**

Once assembled we sprayed our wall with a black car undercoat / primer.  
It was then given a heavy dry brush of a grass-green coloured DIY emulsion.  
The lights were painted bark blue, then dry brushed with an ice blue, followed by white.  
The edges of the lights were painted gold.

Chips were done by painting the desired area white, then once that was dry the inner portion of the area painted black, leaving a thin white outline. Silver was then used inside the black area, leaving a thin black outline.
