

## 28mm Greenhouse / 20mm greenhouse

### B28-ST-104 / B20-ST-107

Please read these instructions fully before starting construction.

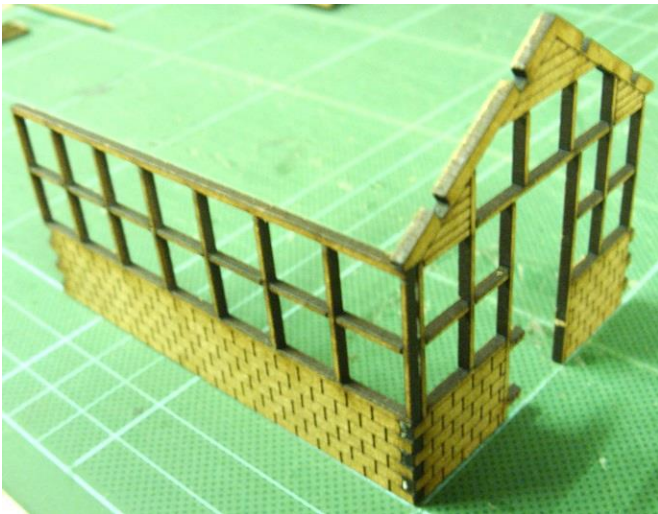

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

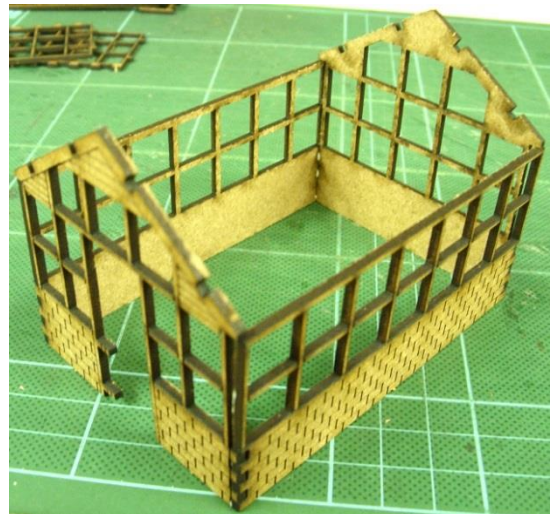

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

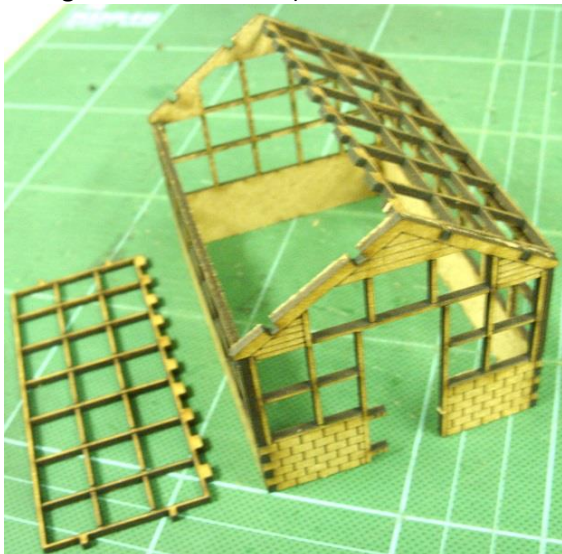

The images shown here are for the 28mm version of the model, but the 20mm instructions are identical except for the potting benches.

Remove the one side and the end with the doorway from the sprue. If you want to be able to open the door, remove it now. Glue the wall and end together (at 90 degrees to each other) as shown above.

Glue the other side and end walls into position.

Remove the two roof sections from the sprue. Glue one into position using the lugs provided (see above). You can either glue the other section into position, or leave it unglued for easy access to the inside of the greenhouse.

The two potting shelves are created by sticking the long shelves to the uprights using the lugs provided as shown above.
