

# Gun Turret

## B28-VSF-003

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Remove the two pieces of the central spindle and glue them together to form a "X" shape.

Take the top and base from the sprue. Put the base (the larger one) to one side for now.

Turn the base over and glue the spindle into place.

Take the main gun piece and four barrel pieces.

Carefully glue these into the space provided.

Take the pieces shown above.

Turn the round piece over and glue the support to the back as shown.

Take the pieces shown above.

Glue them together to form a stack, using the support to help align them.

..and add them to the stack.

Now get these pieces...

Glue the last four slices onto the stack.

Take the spindle you made earlier.

Place (do not glue) the stack onto the spindle.

Glue the base piece to the spindle, ensuring you do not get any glue on the stack.

Turn the whole thing over and you have your gun turret.
