

28mm Power Cores B28-SF-213

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Each power core is formed from the pieces shown above.

First insert one of the rods into the smallest of the hexagonal bases as shown.

Glue the other bases into place to form a stack.

Glue the other rods into position.

Starting with one rod, gently work your way around them slotting each in turn into the top.

Finally attach the two smaller cap pieces.
