

28mm Bus Shelter #1

B28-ST-126

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Glue the two end pieces to the base, with the etched detail facing outwards.

Glue the walls into place by inserting them into the base then **gently** flex them so they attach to the end walls.

Attach the strips for the roof – all apart from one lower strip (the one with 2 holes at one end).

Glue the sign to the roof strip, then attach the strip to the shelter.

The finished bus shelter.
