

## 28mm Street Lamps B28-ST-130

Please read these instructions fully before starting construction.

PVA or equivalent glue will be required to stick sections together.

Sand paper can be used to gently clean any joints.

A sharp modelling knife will be required to remove sections from the sprue. Please use knives with due care and remember to cut away from yourself at all times.

During the construction of this model, you may find it convenient to use pegs / elastic bands to hold pieces in place while you allow glue to dry.

Each lamp is made from the pieces shown above.

Carefully slide the five circles onto the lamps pole.

Glue the end of the pole into the base, then slide the discs back down the pole and glue them into position.

Using the hole cut in the smaller lampshade, slide it over the whole shade.

Align the smaller shade at 90 degrees to the main shade, then slide it downwards so the notch in its base is snug against the base of the main shade.

The finished lamp.
